Welcome to your BehaviourWatch user highlights!

As part of our commitment to ensuring that you have the best user experience with our BehaviourWatch or SchoolPod solution, we have introduced this regular support newsletter. It will keep you informed with any development updates, new resources and quick tips to ensure you get the most out of our products.
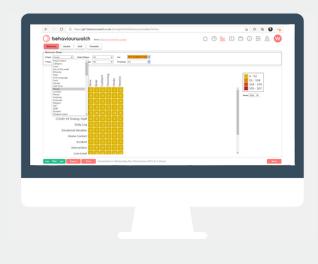

What's New?

The Behaviour Register has had several visual and functional updates released! The Behaviour Register is a great way for staff to quickly and efficiently record behaviour. Recording both positive and negative behaviour observed in lessons will help to reduce slip recording times and ensure that nothing gets missed.

Alongside this, we have also added the ability to bulk mark students with a click of the column header to further speed up the recording of valuable behaviour data.

Did you know?

Categories

Custom categories of students can be set up in the system for use within reports. You can group together students for focused reports where they don't share a form, class or year group. Categories can be set up by going into the School Structure section in Admin & selecting Categories. In the bottom right, you can give your category a name, once saved membership can be added by double-clicking on the name.

Behaviour Register

The Behaviour Radar is a brilliant way to view & compare behaviour data, helping to produce high level and in-depth analysis of information from slips. Within the report, there are two axis dropdowns in the top left, both of which have options to select from. Using this, you can get a variety of comparisons on behaviour data. The Axis filter can be combined with the Filter page to help break down analysis even further.

A Word From Karen!

We are currently running monthly focus group sessions. This is a chance to meet the product managers and discuss your feedback. The next sessions will be Thursday 8th July. If you are interested in attending please contact Karen.

Professional Services

If you are interested in learning more about the system and looking for ways to improve your set up you may be interested in one of our Professional Service Bundles. By being flexible they can be adapted to your needs. Being conducted virtually, they can have as many people as needed.
